

9. Business Model and Go-To-Market

Revenue line	Initial offer	Why it can work
Local AI OS license	\$49-\$199/mo creator/operator subscription	A private assistant with local files, tools, and workflows is easier to sell than generic chat.
Studio/pro plan	\$299-\$999/mo	Includes GOAT Royalty, crew workflows, production support, transcription/study, and secure local setup.
Implementation package	\$1,500-\$10,000 setup	Paid installation, workflow mapping, backup plan, model pack setup, training pack ingestion.
Vertical pilots	\$5k-\$25k pilot	Creator studio, private ops, Halito field communications, Anigo Alley trust demos.
Ultimate Bourré branded demos	Sponsorships, private events, play-money tournaments	Sports-culture gaming gives GOAT a breakout acquisition and retention hook while real-money play stays compliance-gated.
Enterprise/local appliance	\$25k+ annual	Longer-term path for private local deployments with governance, logs, and controls.

Initial wedge: founder-led pilots for creators and small teams that need private AI workflows around media, docs, code, rights, and local files. Avoid selling the whole universe first; sell one painful workflow and reveal the ecosystem as expansion.

10. Valuation and ROI Story

Valuation Ladder

The Ultimate Bourré IP wedge moves the story from app catalog to owned sports-culture gaming upside.

The right seed narrative is not 'we already deserve a growth-stage SaaS multiple.' It is: we have an unusually broad local AI asset base, a reviewed Ultimate Bourré term sheet proving inbound strategic interest, enough live proof to demo, and a funded plan to create the metrics that justify premium pricing while retaining control of the IP wildcard.
