

Oscar / GOAT Product Breakdown Appendix

Functionality, tested proof, launch gaps, profit paths, uniqueness, and problem solved

Prepared as an investor/product diligence companion to the seed EPK.

Evidence boundary: this appendix separates page availability from launch readiness. HTTP 200 means the route loaded; it does not prove payments, accounts, exports, compliance, or full workflow success.

Current verification	Result
Date	June 26, 2026
Goat Launcher	http://goat.2.25.68.216.nip.io/index.html returned HTTP 200, title GOAT Royalty App.
Catalog Links	All tracked non-anchor launch paths extracted from the live launcher returned HTTP 200 in a GET check.
Oscar Tools	http://127.0.0.1:3334/api/tools returned ok=True, runWriteEnabled=True, actions=19, localRequest=True, computerControlEnabled=False.
Local Assets	Local asset footprint checked with du/find: GOAT-Royalty 1.3G, portable web app 463M, training lessons 3.1G, Oscar-Brain 5.9M, Halito 252M, casino 22M.
Ultimate Bourre Ip	Founder-reported ownership of the Ultimate Bourre/Bourre brand position and rules/control advantage; SCCG non-binding term sheet reviewed and stored as private data-room evidence, supporting the declined-partnership/owned-casino strategy.

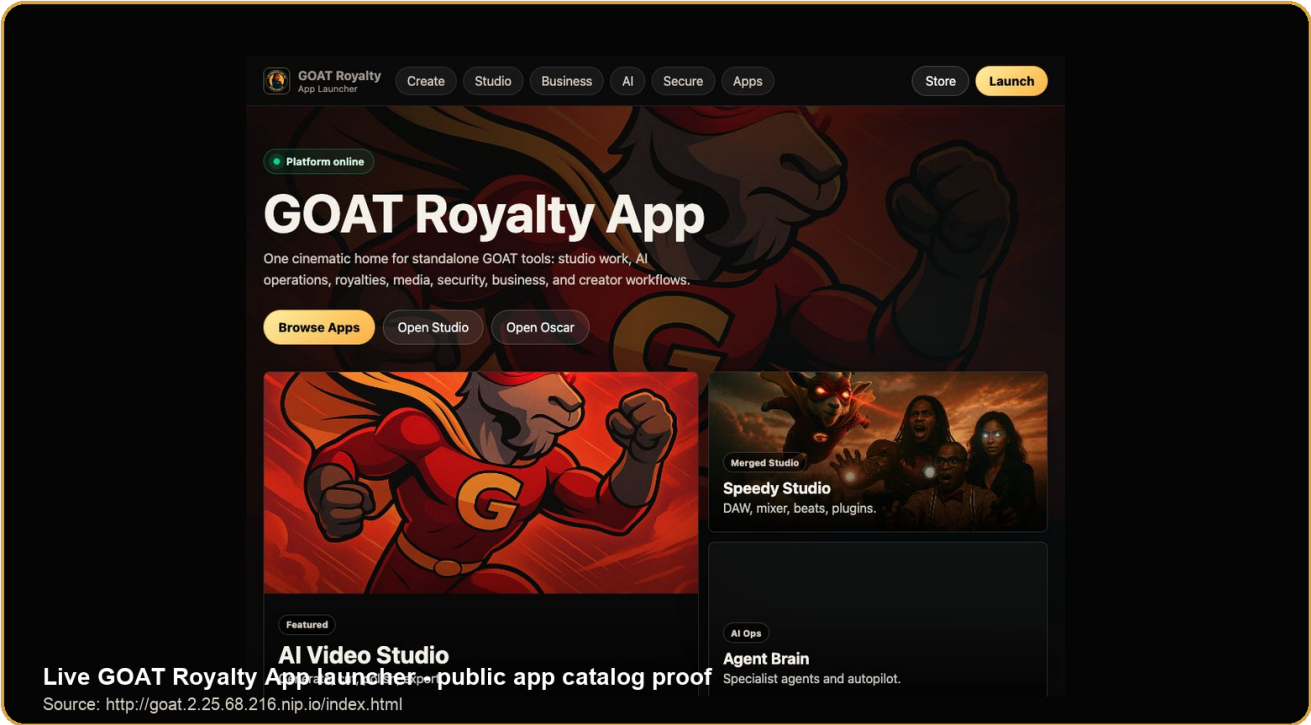

Current verification	Result
Boundary	HTTP 200 confirms page availability, not production readiness, user accounts, payment settlement, legal compliance, or full workflow success.

Ultimate Bourre / SCCG Evidence Update

The SCCG non-binding term sheet is now stored in the private evidence folder. It validates strategic interest while also showing why preserving control of the Ultimate Bourre casino lane matters.

Evidence	Investor use
Reviewed SCCG term sheet	Documented inbound strategic interest; keep private economics out of public deck unless approved.
Declined partner path	Supports the owned-casino strategy and protects the brand/rules wildcard.
Next diligence	Trademark packet, rules/control memo, redacted summary, and gaming counsel memo.

1. Live Catalog And Evidence

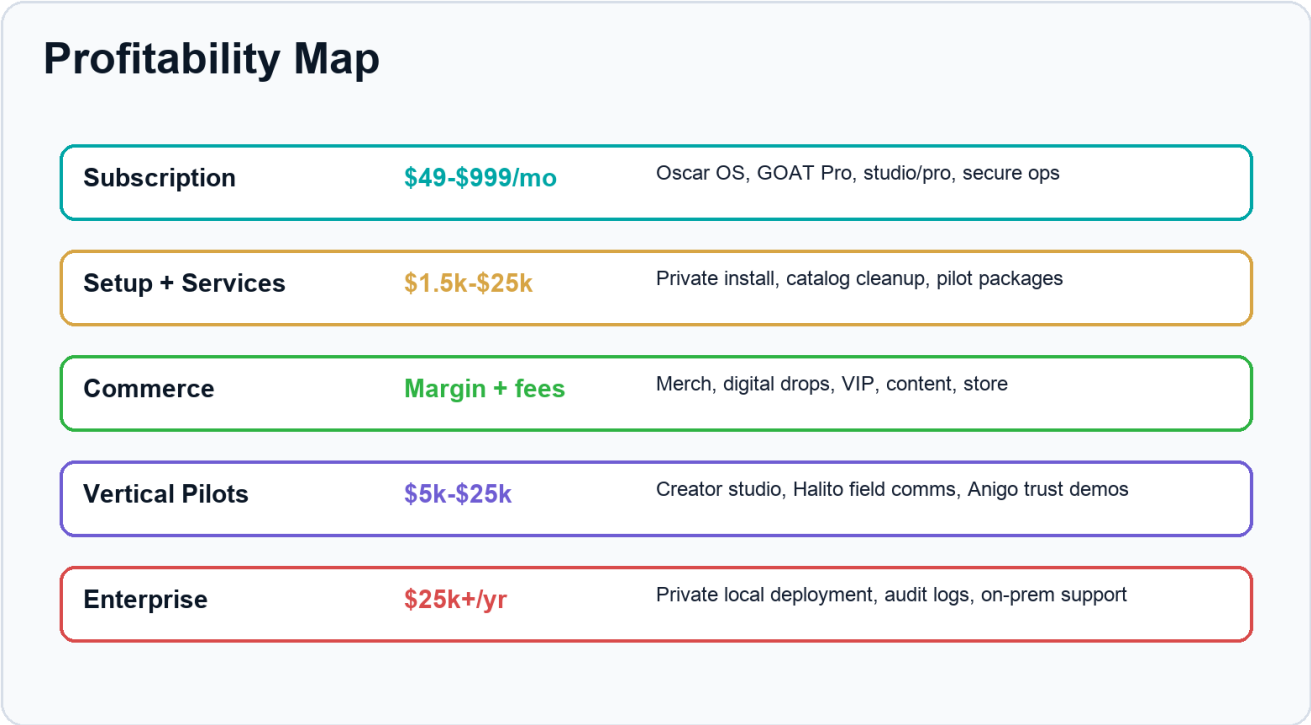

Live Catalog Status Wall

All non-anchor GOAT launcher paths checked on June 26, 2026 returned HTTP 200. This proves page availability, not full workflow launch readiness.

200	Speedy Studio Suite DAW, beats, SSL mixer, plugins.	200	Recording Studio Session workspace for tracks and vocals.	200	Agent Brain Specialist agents for creative and ops.	200	AI Video Prompt-to-scene video workspace.
200	Casino Ultimate Ultimate Bourne flagship table and original game floor.	200	Anigo Alley Creator access and community ops.	200	HalitoChat Field chat and relay workspace.	200	Royalty Calculator Estimate earnings and splits.
200	Security Center Identity, devices, audit controls.	200	Fashion Hub Looks, drops, wardrobe, campaigns.	200	Beat Maker Patterns, drums, loops.	200	SSL Mixer Console and channel control.
200	Vocal Studio Record, tune, stack.	200	Mastering Finalize releases.	200	GOAT MPC Pads and sequencing.	200	Touch Hub Tablet-ready controls.
200	Movie Studio Timeline, effects, export.	200	Screenwriting Scripts and scenes.	200	3D Studio Scenes, fashion, VFX.	200	NFT Studio Create, mint, manage.
200	Catalog Manager Metadata and works.	200	Distribution Release to DSPs.	200	Fan Database Audience and CRM.	200	Industry Network People, deals, reach.
200	Oscar Ops and command brain.	200	LLM Tools Models, routes, and tool access.	200	Autopilot Goal-driven actions.	200	AI Dashboard Models and routes.
200	API Vault Keys and providers.	200	Private Vault Protected files.	200	Biometric Login Identity controls.	200	Crypto Wallet Portfolio workspace.
200	Payments Balances and transfers.	200	Entertainment Stream and monetize.	200	VIP Lounge Private access lane.	200	Fitness Elite Health and coaching.
200	Money Penny Store Drops and products.	200	Production Hub Media jobs and studio pipelines.	200	Installers Mac, Windows, Linux packages.		

2. Profitability Map

The platform can be monetized in layers: base subscription, pro/studio subscription, setup and implementation, commerce, vertical pilots, and eventually enterprise local deployment. The first launch wedge should be narrower than the full catalog.

Asset	Verified footprint	Path
GOAT Royalty app	1.3G local folder	/Volumes/Oscar/Master-Oscar/GOAT-Royalty
GOAT portable web app	463M local web app	/Volumes/Oscar/Master-Oscar/goat-royalty-portable-2.0.0/web-app
Fine-Tune lessons	3.1G training folder	/Volumes/Oscar/Master-Oscar/Training/Fine-Tune-LLMs
Oscar Brain	5.9M distilled library	/Volumes/Oscar/Master-Oscar/Oscar-Brain
Halito Chat	252M local project	/Users/raspy/halito-chat-ios
GOAT Casino	22M local demo	/Users/raspy/crypto-casino

Master Oscar Core

Master Oscar Core

Local AI OS

Creators and operators need private AI that can work with their local files and tools without pushing every workflow into a cloud account.

Functionality

- Chat UI, local model routing, file context, voice/read controls, attachments lane, and owner-supervised tool mode.
- Local-first operations around the Master-Oscar drive, Oscar Brain context, and workspace files.
- Can become the command layer for the GOAT app suite rather than another generic chatbot.

Launch Left

- Turn the current runtime into a one-click installer/update flow.
- Finish reliability scorecards, model health checks, tool logs, and user-friendly recovery screens.
- Computer control is currently reported disabled by the tool API, so Mac/app control must be re-enabled and retested before launch.

Profit Paths

- \$49-\$199/mo local AI OS subscription.
- \$1,500-\$10,000 implementation packages for private creator/operator setups.
- Enterprise/local appliance pricing for teams that need private file workflows.

Tested: Local tools endpoint returned ok=True and localRequest=True.; Tool API exposed 19 actions including read, search, run, write, patch, web_fetch, diagnose, self_heal, security_audit, agent_control, and computer.; runWriteEnabled=True was reported by the live local endpoint.

Problem solved	Creators and operators need private AI that can work with their local files and tools without pushing every workflow into a cloud account.
Functionality	Chat UI, local model routing, file context, voice/read controls, attachments lane, and owner-supervised tool mode. Local-first operations around the Master-Oscar drive, Oscar Brain context, and workspace files. Can become the command layer for the GOAT app suite rather than another generic chatbot.
Tested / verified	Local tools endpoint returned ok=True and localRequest=True. Tool API exposed 19 actions including read, search, run, write, patch, web_fetch, diagnose, self_heal, security_audit, agent_control, and computer. runWriteEnabled=True was reported by the live local endpoint.
Left before launch	Turn the current runtime into a one-click installer/update flow. Finish reliability scorecards, model health checks, tool logs, and user-friendly recovery screens. Computer control is currently reported disabled by the tool API, so Mac/app control must be re-enabled and retested before launch.
Profit paths	\$49-\$199/mo local AI OS subscription. \$1,500-\$10,000 implementation packages for private creator/operator setups. Enterprise/local appliance pricing for teams that need private file workflows.
Unique / special	Local-first AI OS plus owned app portfolio, not a thin wrapper on one LLM. Owner-supervised file and tool actions create a safer automation story.

Oscar Brain, Self-Heal, and Maintenance

Oscar Brain, Self-Heal, and Maintenance

Trust and reliability

A local AI system loses investor trust if it forgets its operating rules, repeats stale identity text, or cannot diagnose common runtime damage.

Functionality

- Distilled retrieval library for identity, operating rules, storage maps, playbooks, self-system loops, and training strategy.
- Self-heal policy can create missing runtime directories, restore chat/settings JSON, restore executable bits, compile-check chat_server.py, and restore advanced tool/computer settings when requested.
- Maintenance context is designed to be read-only and owner-approved for risky actions.

Launch Left

- Expose clear status screens for brain index freshness, last maintenance snapshot, and last self-heal run.
- Add before/after repair reports and automated non-destructive diagnostics.
- Keep self-heal claims honest: no uncontrolled self-modification or live weight learning.

Profit Paths

- Reliability tier for local AI OS subscriptions.
- Maintenance/support retainers for artists, studios, and small teams.
- Compliance-friendly on-prem package with audit logs.

Tested: Oscar tool API reported selfHealPolicy.localOnly=True, ownerApproved=True, dryRunSupported=True.; Memory records show Oscar Brain was wired into live runtime behavior and stale AGENT-007 self-heal text was fixed.

Problem solved	A local AI system loses investor trust if it forgets its operating rules, repeats stale identity text, or cannot diagnose common runtime damage.
Functionality	Distilled retrieval library for identity, operating rules, storage maps, playbooks, self-system loops, and training strategy. Self-heal policy can create missing runtime directories, restore chat/settings JSON, restore executable bits, compile-check chat_server.py, and restore advanced tool/computer settings when requested. Maintenance context is designed to be read-only and owner-approved for risky actions.
Tested / verified	Oscar tool API reported selfHealPolicy.localOnly=True, ownerApproved=True, dryRunSupported=True. Memory records show Oscar Brain was wired into live runtime behavior and stale AGENT-007 self-heal text was fixed.
Left before launch	Expose clear status screens for brain index freshness, last maintenance snapshot, and last self-heal run. Add before/after repair reports and automated non-destructive diagnostics. Keep self-heal claims honest: no uncontrolled self-modification or live weight learning.
Profit paths	Reliability tier for local AI OS subscriptions. Maintenance/support retainers for artists, studios, and small teams. Compliance-friendly on-prem package with audit logs.
Unique / special	The trust layer is productized instead of hidden. Combines local retrieval, maintenance snapshots, and owner-approved repairs.

Training and Transcription Engine

Training and Transcription Engine

Learning pipeline

Training videos and lessons are hard to turn into searchable knowledge, study guides, quizzes, and eventual model behavior improvements.

Functionality

- Fine-tune lesson inventory, MP4/audio transcription lane, HTML text extraction, study guide generation, quizzes, answer keys, and flashcards.
- Uses a local-first workflow with faster-whisper style transcription and model/extractive fallbacks.
- Creates a path from training content to retrieval packs before expensive fine-tuning.

Launch Left

- Run a complete transcript batch and verify transcript quality by lesson.
- Add source citations and retrieval packaging for Oscar Brain ingestion.
- Define when to use retrieval versus fine-tuning so costs stay controlled.

Profit Paths

- Course-to-study-pack service.
- Paid creator/team knowledge-base setup.
- Premium training ingestion for studios and educators.

Tested: trainingTranscriptionPolicy exposed inventory, start, status, and stop operations.; Policy points to /Volumes/Oscar/Master-Oscar/Training/Fine-Tune-LLMs and _transcripts output.; Local training folder measured at 3.1G.

Problem solved	Training videos and lessons are hard to turn into searchable knowledge, study guides, quizzes, and eventual model behavior improvements.
Functionality	Fine-tune lesson inventory, MP4/audio transcription lane, HTML text extraction, study guide generation, quizzes, answer keys, and flashcards. Uses a local-first workflow with faster-whisper style transcription and model/extractive fallbacks. Creates a path from training content to retrieval packs before expensive fine-tuning.
Tested / verified	trainingTranscriptionPolicy exposed inventory, start, status, and stop operations. Policy points to /Volumes/Oscar/Master-Oscar/Training/Fine-Tune-LLMs and _transcripts output. Local training folder measured at 3.1G.
Left before launch	Run a complete transcript batch and verify transcript quality by lesson. Add source citations and retrieval packaging for Oscar Brain ingestion. Define when to use retrieval versus fine-tuning so costs stay controlled.
Profit paths	Course-to-study-pack service. Paid creator/team knowledge-base setup. Premium training ingestion for studios and educators.
Unique / special	Turns the owner's actual video curriculum into Oscar-native operating knowledge. Local-first path avoids uploading private training libraries by default.

GOAT Royalty App Launcher

GOAT Royalty App Launcher

Owned product suite

Creators use scattered tools for music, rights, fan data, security, payments, and media. The launcher creates one owner-controlled home base.

Functionality

- Public launcher for studio, create, business, money, AI, secure, casino, Anigo, Halito, store, installer, and production surfaces.
- Routes users to the full product suite and serves as the investor-visible catalog.
- Positions GOAT as a product platform rather than one isolated app.

Launch Left

- Unify login/session handling across surfaces.
- Decide launch wedge: do not sell every app equally on day one.
- Add telemetry, onboarding, pricing gates, and support flow.

Profit Paths

- GOAT Pro bundle subscription.
- Upsell studio tools, AI ops, security, and business add-ons.
- Marketplace/store revenue, setup fees, and vertical pilot packages.

Tested: Main launcher returned HTTP 200 with title GOAT Royalty App.; All extracted non-anchor app links returned HTTP 200 in the current check.; Live app screenshot and catalog graphic are included in the appendix.

Problem solved	Creators use scattered tools for music, rights, fan data, security, payments, and media. The launcher creates one owner-controlled home base.
Functionality	Public launcher for studio, create, business, money, AI, secure, casino, Anigo, Halito, store, installer, and production surfaces. Routes users to the full product suite and serves as the investor-visible catalog. Positions GOAT as a product platform rather than one isolated app.
Tested / verified	Main launcher returned HTTP 200 with title GOAT Royalty App. All extracted non-anchor app links returned HTTP 200 in the current check. Live app screenshot and catalog graphic are included in the appendix.
Left before launch	Unify login/session handling across surfaces. Decide launch wedge: do not sell every app equally on day one. Add telemetry, onboarding, pricing gates, and support flow.
Profit paths	GOAT Pro bundle subscription. Upsell studio tools, AI ops, security, and business add-ons. Marketplace/store revenue, setup fees, and vertical pilot packages.
Unique / special	A visible owned app portfolio with a single branded command surface. Combines creator economy, private AI, studio tools, and trust/security surfaces.

Speedy Studio and Creator Tools

Speedy Studio and Creator Tools

Music and media creation

Artists need practical creation tools and studio workflows tied to rights, distribution, and AI help, not isolated toys.

Functionality

- Studio suite, recording studio, beat maker, SSL mixer, vocal studio, mastering, GOAT MPC, touch controls, movie studio, screenwriting, 3D studio, and AI video surfaces.
- Designed to connect creation workflows to catalog, distribution, fan, and revenue tools.
- Can become the flagship demo wedge because it is visually understandable to creators.

Launch Left

- Verify actual save/export paths, audio engine behavior, file upload/download, mobile/touch performance, and browser compatibility.
- Separate polished demo workflows from experimental screens.
- Add sample projects and guided proof videos.

Profit Paths

- \$29-\$99/mo creator tier.
- \$299-\$999/mo studio/pro tier with setup support.
- Preset packs, sample packs, mastering credits, and production services.

Tested: Speedy Studio, studio.html, beat-maker, SSL mixer, vocal studio, mastering, MPC, movie, screenwriting, 3D, and AI video pages all returned HTTP 200.; Several pages expose full HTML titles and sizable page payloads, indicating real page assets rather than empty stubs.

Problem solved	Artists need practical creation tools and studio workflows tied to rights, distribution, and AI help, not isolated toys.
Functionality	Studio suite, recording studio, beat maker, SSL mixer, vocal studio, mastering, GOAT MPC, touch controls, movie studio, screenwriting, 3D studio, and AI video surfaces. Designed to connect creation workflows to catalog, distribution, fan, and revenue tools. Can become the flagship demo wedge because it is visually understandable to creators.
Tested / verified	Speedy Studio, studio.html, beat-maker, SSL mixer, vocal studio, mastering, MPC, movie, screenwriting, 3D, and AI video pages all returned HTTP 200. Several pages expose full HTML titles and sizable page payloads, indicating real page assets rather than empty stubs.
Left before launch	Verify actual save/export paths, audio engine behavior, file upload/download, mobile/touch performance, and browser compatibility. Separate polished demo workflows from experimental screens. Add sample projects and guided proof videos.
Profit paths	\$29-\$99/mo creator tier. \$299-\$999/mo studio/pro tier with setup support. Preset packs, sample packs, mastering credits, and production services.
Unique / special	Creation tools are attached to rights, business, fan, and AI ops surfaces. Studio lane gives investors something concrete to watch in a demo.

Agent Brain, LLM Tools, and Autopilot

Agent Brain, LLM Tools, and Autopilot

AI operations

Small teams need specialist AI help, but generic chat tools do not understand local goals, roles, model routing, or owner-approved actions.

Functionality

- Agent Brain, AI Dashboard, LLM Tools, Autopilot, API Vault, Oscar command brain, and specialist crew concepts such as Money Penny.
- Routes models/tools and frames a specialist-agent operating layer.
- Can support creator ops, business ops, code support, security review, and documentation.

Launch Left

- Define agent permissions, evals, safety gates, tool audit logs, and task success metrics.
- Separate real agent capabilities from persona/branding copy.
- Add model health selection and fallback UX.

Profit Paths

- AI ops subscription tier.
- Paid setup for specialist agent crews.
- Enterprise/local AI workbench licensing.

Tested: Agent Brain, AI Dashboard, LLM Tools, Autopilot, API Vault, and Oscar routes returned HTTP 200.; Oscar local tool API exposed agent_control and tool_adapter policies.

Problem solved	Small teams need specialist AI help, but generic chat tools do not understand local goals, roles, model routing, or owner-approved actions.
Functionality	Agent Brain, AI Dashboard, LLM Tools, Autopilot, API Vault, Oscar command brain, and specialist crew concepts such as Money Penny. Routes models/tools and frames a specialist-agent operating layer. Can support creator ops, business ops, code support, security review, and documentation.
Tested / verified	Agent Brain, AI Dashboard, LLM Tools, Autopilot, API Vault, and Oscar routes returned HTTP 200. Oscar local tool API exposed agent_control and tool_adapter policies.
Left before launch	Define agent permissions, evals, safety gates, tool audit logs, and task success metrics. Separate real agent capabilities from persona/branding copy. Add model health selection and fallback UX.
Profit paths	AI ops subscription tier. Paid setup for specialist agent crews. Enterprise/local AI workbench licensing.
Unique / special	Specialist crews sit inside an owned app suite instead of living as isolated prompts. Local tool policies make the autonomy story more credible than unsupervised agents.

Business, Royalty, Catalog, and Distribution

Business, Royalty, Catalog, and Distribution

Creator business ops

Independent creators lose time and money when splits, metadata, distribution, fan CRM, network contacts, and releases are scattered.

Functionality

- Royalty calculator, catalog manager, distribution tracker, fan database, industry network, store, payments, and production hub.
- Frames the business side of the artist lifecycle from works to fans to deals.
- Can become the paid wedge for serious creator teams.

Launch Left

- Validate royalty math, metadata schemas, import/export, CRM persistence, payment handling, and DSP integration boundaries.
- Add audit logs and clear disclaimers where calculations are estimates.
- Choose the first paid business workflow and polish it deeply.

Profit Paths

- Creator business SaaS subscription.
- Paid catalog cleanup and release setup services.
- Revenue share or partner fees where legally and contractually appropriate.

Tested: Royalty Calculator, Catalog Manager, Distribution, Fan Database, Industry Network, Shop, Payments, and Production Hub returned HTTP 200.

Problem solved	Independent creators lose time and money when splits, metadata, distribution, fan CRM, network contacts, and releases are scattered.
Functionality	Royalty calculator, catalog manager, distribution tracker, fan database, industry network, store, payments, and production hub. Frames the business side of the artist lifecycle from works to fans to deals. Can become the paid wedge for serious creator teams.
Tested / verified	Royalty Calculator, Catalog Manager, Distribution, Fan Database, Industry Network, Shop, Payments, and Production Hub returned HTTP 200.
Left before launch	Validate royalty math, metadata schemas, import/export, CRM persistence, payment handling, and DSP integration boundaries. Add audit logs and clear disclaimers where calculations are estimates. Choose the first paid business workflow and polish it deeply.
Profit paths	Creator business SaaS subscription. Paid catalog cleanup and release setup services. Revenue share or partner fees where legally and contractually appropriate.
Unique / special	Combines creative tooling and business tooling under one brand. Solves creator operational chaos, not just content generation.

GOAT Casino

GOAT Casino

Gamified engagement

Audience engagement is hard to sustain; culturally specific card games can create repeat visits and community energy when handled safely.

Functionality

- Ultimate Bourre Casino and standalone game floor surfaces.
- Designed as a play-money/demo vertical with mobile-first, compact icon navigation.
- Ultimate Bourre becomes the flagship branded table inside the broader GOAT Casino lane.

Launch Left

- Keep real-money gambling disabled unless licensed and counsel-approved.
- Add trademark packet, rules memo, compliance review, age gating, responsible-play messaging, and clear demo-only labels.
- Run gameplay QA, mobile QA, persistence checks, and abuse prevention.

Profit Paths

- Play-money sponsorships and branded tournaments.
- Creator-community engagement tier.
- Licensable Ultimate Bourre game UI if legal path is established later.

Tested: <http://casino.2.25.68.216.nip.io/> returned HTTP 200 with title Ultimate Bourre Casino.; Prior memory records preserve that the casino was intentionally play-money/demo-only and mobile-first refinements were verified.

Problem solved	Audience engagement is hard to sustain; culturally specific card games can create repeat visits and community energy when handled safely.
Functionality	Ultimate Bourre Casino and standalone game floor surfaces. Designed as a play-money/demo vertical with mobile-first, compact icon navigation. Ultimate Bourre becomes the flagship branded table inside the broader GOAT Casino lane.
Tested / verified	http://casino.2.25.68.216.nip.io/ returned HTTP 200 with title Ultimate Bourre Casino. Prior memory records preserve that the casino was intentionally play-money/demo-only and mobile-first refinements were verified.
Left before launch	Keep real-money gambling disabled unless licensed and counsel-approved. Add trademark packet, rules memo, compliance review, age gating, responsible-play messaging, and clear demo-only labels. Run gameplay QA, mobile QA, persistence checks, and abuse prevention.
Profit paths	Play-money sponsorships and branded tournaments. Creator-community engagement tier. Licensable Ultimate Bourre game UI if legal path is established later.
Unique / special	A culturally specific game/community vertical attached to the broader GOAT suite. Can drive retention without pretending to be a financial product.

Ultimate Bourre IP and Rules Advantage

Ultimate Bourre IP and Rules Advantage

Sports-culture gaming IP

Bourre/BooRay has documented NBA and athlete-culture awareness, but the market lacks a clean online flagship with owner-controlled brand, rules, and community positioning.

Functionality

- Founder-reported ownership of the Ultimate Bourre trademark/brand position and a rules/control advantage around the game.
- Turns GOAT Casino from a generic game floor into a branded sports-culture gaming wedge.
- Can support play-money tournaments, celebrity/community events, licensing conversations, and eventual regulated pathways if counsel-approved.

Launch Left

- Add trademark serial/registration, owner entity, classes, screenshots, and chain-of-title to investor data room.
- Prepare a redacted investor-safe SCCG summary and keep the full term sheet in the private data room.
- Complete gaming counsel memo, age/responsible-play policy, demo-only labels, and jurisdiction-by-jurisdiction launch plan.

Profit Paths

- Branded play-money tournaments, private celebrity/community events, sponsorships, and merch.
- Licensing or joint venture leverage with casino/social-casino partners if terms protect the owned mark and rules position.
- Premium acquisition hook for GOAT Casino, VIP Lounge, creator communities, and entertainment campaigns.

Tested: Ultimate Bourre Casino page returned HTTP 200 with title Ultimate Bourre Casino.; Public reporting connects Bourre/BooRay to NBA player culture and third-party commercialization attempts.; SCCG non-binding term sheet reviewed locally and copied into the investor evidence folder.; The term sheet proposed a partner path with meaningful economics/control around the sweeps-casino lane; founder declined to preserve the wildcard and build an owned casino path.

Problem solved	Bourre/BooRay has documented NBA and athlete-culture awareness, but the market lacks a clean online flagship with owner-controlled brand, rules, and community positioning.
Functionality	Founder-reported ownership of the Ultimate Bourre trademark/brand position and a rules/control advantage around the game. Turns GOAT Casino from a generic game floor into a branded sports-culture gaming wedge. Can support play-money tournaments, celebrity/community events, licensing conversations, and eventual regulated pathways if counsel-approved.
Tested / verified	Ultimate Bourre Casino page returned HTTP 200 with title Ultimate Bourre Casino. Public reporting connects Bourre/BooRay to NBA player culture and third-party commercialization attempts. SCCG non-binding term sheet reviewed locally and copied into the investor evidence folder. The term sheet proposed a partner path with meaningful economics/control around the sweeps-casino lane; founder declined to preserve the wildcard and build an owned casino path.
Left before launch	Add trademark serial/registration, owner entity, classes, screenshots, and chain-of-title to investor data room. Prepare a redacted investor-safe SCCG summary and keep the full term sheet in the private data room. Complete gaming counsel memo, age/responsible-play policy, demo-only labels, and jurisdiction-by-jurisdiction launch plan.
Profit paths	Branded play-money tournaments, private celebrity/community events, sponsorships, and merch. Licensing or joint venture leverage with casino/social-casino partners if terms protect the owned mark and rules position. Premium acquisition hook for GOAT Casino, VIP Lounge, creator communities, and entertainment campaigns.
Unique / special	Owned branded lane around a culturally proven athlete card game. The reviewed SCCG term sheet signals strategic market interest while also proving why control of the wildcard matters.

Anigo Alley

Anigo Alley

Creator trust and community

Creators need private access, leak accountability, identity trust, and community control without hiding the protection story in the backend.

Functionality

- Creator access/community app with age gate and trust positioning.
- Strategic watermark concept: visible dynamic watermarking as front-of-house proof, backed by broader enforcement ideas.
- Can serve as the creator-protection trust layer for premium media and private access.

Launch Left

- Verify live auth, persistence, privacy request flow, creator onboarding, watermark demo, and enforcement boundaries.
- Build a screen-recordable watermark proof video.
- Complete legal/privacy policy review before investor/customer rollout.

Profit Paths

- Premium creator access memberships.
- Trust/security tier for media creators.
- White-label creator protection demos for agencies and platforms.

Tested: <https://anigoalley.com/> returned HTTP 200 with title Age Gate | Anigo Alley.; Memory records preserve the dynamic visible watermarking positioning and earlier Anigo Alley persistence/privacy work.

Problem solved	Creators need private access, leak accountability, identity trust, and community control without hiding the protection story in the backend.
Functionality	Creator access/community app with age gate and trust positioning. Strategic watermark concept: visible dynamic watermarking as front-of-house proof, backed by broader enforcement ideas. Can serve as the creator-protection trust layer for premium media and private access.
Tested / verified	https://anigoalley.com/ returned HTTP 200 with title Age Gate Anigo Alley. Memory records preserve the dynamic visible watermarking positioning and earlier Anigo Alley persistence/privacy work.
Left before launch	Verify live auth, persistence, privacy request flow, creator onboarding, watermark demo, and enforcement boundaries. Build a screen-recordable watermark proof video. Complete legal/privacy policy review before investor/customer rollout.
Profit paths	Premium creator access memberships. Trust/security tier for media creators. White-label creator protection demos for agencies and platforms.
Unique / special	Turns security into visible proof users can understand. Pairs creator community with leak accountability and trust storytelling.

Halito Chat

Halito Chat

Private and off-grid communication

Communities, crews, and field teams need communication options when internet access is weak, absent, or not the trust anchor.

Functionality

- Browser relay and field chat surface, with prior standalone Halito/off-grid mesh product work.
- Current honest framing: browser-to-browser relay now; native Bluetooth/Wi-Fi Direct mesh later.
- Can support private group coordination, events, field crews, and emergency-adjacent use cases.

Launch Left

- Verify invite flow, message persistence, encryption model, relay hosting, mobile UX, and offline/native radio roadmap.
- Avoid claiming native mesh until native phone implementation proves it.
- Add threat model and security review.

Profit Paths

- Private crew communication subscriptions.
- Event/field deployment packages.
- On-prem or self-hosted relay setup.

Tested: /halito-chat/ returned HTTP 200 with title Halito Chat.; Local Halito project measured at 252M.; Memory records preserve the distinction: SimpleX is private internet relay; Halito is nearby/off-grid communication when internet is not the hero.

Problem solved	Communities, crews, and field teams need communication options when internet access is weak, absent, or not the trust anchor.
Functionality	Browser relay and field chat surface, with prior standalone Halito/off-grid mesh product work. Current honest framing: browser-to-browser relay now; native Bluetooth/Wi-Fi Direct mesh later. Can support private group coordination, events, field crews, and emergency-adjacent use cases.
Tested / verified	/halito-chat/ returned HTTP 200 with title Halito Chat. Local Halito project measured at 252M. Memory records preserve the distinction: SimpleX is private internet relay; Halito is nearby/off-grid communication when internet is not the hero.
Left before launch	Verify invite flow, message persistence, encryption model, relay hosting, mobile UX, and offline/native radio roadmap. Avoid claiming native mesh until native phone implementation proves it. Add threat model and security review.
Profit paths	Private crew communication subscriptions. Event/field deployment packages. On-prem or self-hosted relay setup.
Unique / special	Positioned around staying connected when the internet is not the hero. Clear path from browser prototype to native phone companion.

Security, Vault, Identity, and API Controls

Security, Vault, Identity, and API Controls

Protected operations

AI and creator tools handle sensitive keys, files, identity, and payment-adjacent data; without security surfaces, investors will treat the platform as fragile.

Functionality

- Security Center, Private Vault, API Vault, Biometric Login, fingerprint analysis, protected files, and provider/key management surfaces.
- Supports a stronger investor story around local-first privacy and controlled access.

Launch Left

- Security audit, encryption design, key storage threat model, biometric/privacy compliance, and vault restore tests.
- Document which controls are demo UI versus production-grade security.

Profit Paths

- Security add-on tier.
- Private setup and audit packages.
- Enterprise/local deployment premium.

Tested: Security Center, API Vault, Private Vault, and Biometric Login pages returned HTTP 200.; Oscar tool API exposes security_audit and webFetch embedded-credential blocking policy.

Problem solved	AI and creator tools handle sensitive keys, files, identity, and payment-adjacent data; without security surfaces, investors will treat the platform as fragile.
Functionality	Security Center, Private Vault, API Vault, Biometric Login, fingerprint analysis, protected files, and provider/key management surfaces. Supports a stronger investor story around local-first privacy and controlled access.
Tested / verified	Security Center, API Vault, Private Vault, and Biometric Login pages returned HTTP 200. Oscar tool API exposes security_audit and webFetch embedded-credential blocking policy.
Left before launch	Security audit, encryption design, key storage threat model, biometric/privacy compliance, and vault restore tests. Document which controls are demo UI versus production-grade security.
Profit paths	Security add-on tier. Private setup and audit packages. Enterprise/local deployment premium.
Unique / special	Security is not separate from the platform; it is part of the operating system and creator trust story.

Payments, Wallet, Crypto, VIP, Lifestyle, and Store

Payments, Wallet, Crypto, VIP, Lifestyle, and Store

Commerce and audience

Creators need monetization, merch, audience offers, lifestyle content, and payment-adjacent workflows, but these areas require careful legal boundaries.

Functionality

- Payments, crypto wallet, Money Penny Store, VIP Lounge, Entertainment, Fitness Elite, and Fashion Hub surfaces.
- Supports audience monetization, private access, digital products, merchandise, and brand extensions.

Launch Left

- Payment processor integration, refunds, taxes, terms, wallet compliance, KYC/AML review where needed, and order fulfillment.
- Decide which commerce flows are demo-only versus launch-ready.

Profit Paths

- Subscriptions, merch margin, VIP memberships, digital drops, service fees, and commerce setup packages.

Tested: Payments, Crypto Wallet, Shop, VIP Lounge, Entertainment, Fitness Elite, and Fashion Hub pages returned HTTP 200.

Problem solved	Creators need monetization, merch, audience offers, lifestyle content, and payment-adjacent workflows, but these areas require careful legal boundaries.
Functionality	Payments, crypto wallet, Money Penny Store, VIP Lounge, Entertainment, Fitness Elite, and Fashion Hub surfaces. Supports audience monetization, private access, digital products, merchandise, and brand extensions.
Tested / verified	Payments, Crypto Wallet, Shop, VIP Lounge, Entertainment, Fitness Elite, and Fashion Hub pages returned HTTP 200.
Left before launch	Payment processor integration, refunds, taxes, terms, wallet compliance, KYC/AML review where needed, and order fulfillment. Decide which commerce flows are demo-only versus launch-ready.
Profit paths	Subscriptions, merch margin, VIP memberships, digital drops, service fees, and commerce setup packages.
Unique / special	Combines commerce with creative production, fan data, and AI ops instead of treating monetization as an afterthought.

4. Individual Live App Breakdown

Each app below is a distinct live launch surface from the GOAT launcher. The tested field is intentionally conservative: page load was verified, but deeper production workflows still require QA before launch claims.

Speedy Studio Suite (Studio)

Functionality	DAW, beats, SSL mixer, plugins.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Speedy Studio Suite - GOAT Royalty. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	/speedy-studio/

Recording Studio (Studio)

Functionality	Session workspace for tracks and vocals.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: DJ Speedy GOAT Ultimate Studio - SSL Gumbo Suite. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	studio.html

Agent Brain (AI)

Functionality	Specialist agents for creative and ops.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Agents Brain - AI Command Center. Deep workflow QA not yet claimed.
Left before launch	Define agent permissions, evals, tool logs, model fallback behavior, and owner approval gates.
Profit paths	AI ops subscription, specialist-agent setup, private local workbench licensing.
Unique / special	Pairs specialist AI with local tool policies and GOAT workflows.
Problem solved	Small teams need useful AI workers that understand goals and boundaries.
Launch path	agents-brain.html

AI Video (Media)

Functionality	Prompt-to-scene video workspace.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT AI Video Generator Sora 2 Powered. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	goat-ai-video.html

Casino Ultimate (Casino)

Functionality	Ultimate Bourre flagship table and original game floor.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Ultimate Bourre Casino. Deep workflow QA not yet claimed.
Left before launch	Keep play-money/demo-only until licensed; add trademark packet, rules memo, age/responsible-play checks, gameplay QA, and compliance review.
Profit paths	Ultimate Bourre branded play-money tournaments, sponsorships, private events, merch, community engagement, licensed path later if approved.
Unique / special	Sports-culture card-game IP inside a broader creator platform, not a generic casino skin.
Problem solved	Communities need repeat engagement mechanics around a culturally proven game without starting as risky real-money gambling.
Launch path	http://casino.2.25.68.216.nip.io/

Anigo Alley (Anigo)

Functionality	Creator access and community ops.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Age Gate Anigo Alley. Deep workflow QA not yet claimed.
Left before launch	Verify auth, age gate, persistence, privacy flows, watermark demo, and creator onboarding.
Profit paths	Premium creator access, trust/security tier, white-label protection demos.
Unique / special	Turns creator protection into visible proof and community trust.
Problem solved	Creators need private access, leak accountability, and community control.
Launch path	https://anigoalley.com/

HalitoChat (Mesh)

Functionality	Field chat and relay workspace.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Halito Chat. Deep workflow QA not yet claimed.
Left before launch	Verify invite flow, relay behavior, encryption, mobile UX, persistence, and native/offline roadmap.
Profit paths	Private crew comms subscription, field/event deployment, self-hosted relay packages.
Unique / special	Focused on communication when the internet is weak or not the hero.
Problem solved	Crews need private communication paths for field and off-grid scenarios.
Launch path	/halito-chat/

Royalty Calculator (Money)

Functionality	Estimate earnings and splits.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Royalty Calculator - GOAT Force. Deep workflow QA not yet claimed.
Left before launch	Validate persistence, imports/exports, metadata schemas, calculations, CRM flows, and integration boundaries.
Profit paths	Business SaaS tier, catalog cleanup, release setup, CRM/network packages.
Unique / special	Connects creator business ops directly to creation and fan surfaces.
Problem solved	Creators lose money when rights, metadata, fans, and releases are scattered.
Launch path	royalty-calc.html

Security Center (Secure)

Functionality	Identity, devices, audit controls.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Security Center GOAT Royalty. Deep workflow QA not yet claimed.
Left before launch	Complete security audit, encryption/key-storage design, recovery tests, privacy policy, and production threat model.
Profit paths	Security add-on, private vault setup, enterprise/local deployment premium.
Unique / special	Makes privacy and key management part of the creator OS.
Problem solved	Sensitive files, keys, identity, and AI tools need visible control.
Launch path	goat-security.html

Fashion Hub (Lifestyle)

Functionality	Looks, drops, wardrobe, campaigns.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Fashion Hub. Deep workflow QA not yet claimed.
Left before launch	Confirm payment/legal boundaries, refund/tax flows, wallet compliance, fulfillment, and customer support.
Profit paths	Memberships, merch margin, digital drops, transaction/setup fees, VIP access.
Unique / special	Monetization surfaces sit beside studio, fan, and AI ops tools.
Problem solved	Creators need audience monetization without hopping between disconnected tools.
Launch path	goat-fashion-hub.html

Beat Maker (Studio)

Functionality	Patterns, drums, loops.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: DJ Speedy GOAT Ultimate Studio - SSL Gumbo Suite. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	beat-maker.html

SSL Mixer (Studio)

Functionality	Console and channel control.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: DJ Speedy GOAT Ultimate Studio - SSL Gumbo Suite. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	ssl-mixer.html

Vocal Studio (Studio)

Functionality	Record, tune, stack.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Vocal Studio - Pro Vocal Chain. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	vocal-studio.html

Mastering (Studio)

Functionality	Finalize releases.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Mastering - AI Mastering Suite. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	mastering.html

GOAT MPC (Studio)

Functionality	Pads and sequencing.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT MPC - Ultimate Beat Machine. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	goat-mpc.html

Touch Hub (Touch)

Functionality	Tablet-ready controls.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Touch Hub. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	touch-hub.html

Movie Studio (Media)

Functionality	Timeline, effects, export.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Movie Studio - Video Editor. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	movie-studio.html

Screenwriting (Writing)

Functionality	Scripts and scenes.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Ms Money Penny - Screenwriting Studio. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	screenwriting.html

3D Studio (3D)

Functionality	Scenes, fashion, VFX.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT 3D Studio - Fashion Animation. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	goat-3d-studio.html

NFT Studio (Web3)

Functionality	Create, mint, manage.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT NFT Studio Create, Mint & Trade. Deep workflow QA not yet claimed.
Left before launch	Confirm payment/legal boundaries, refund/tax flows, wallet compliance, fulfillment, and customer support.
Profit paths	Memberships, merch margin, digital drops, transaction/setup fees, VIP access.
Unique / special	Monetization surfaces sit beside studio, fan, and AI ops tools.
Problem solved	Creators need audience monetization without hopping between disconnected tools.
Launch path	goat-nft-studio.html

Catalog Manager (Business)

Functionality	Metadata and works.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Complete Catalog - GOAT Royalty App. Deep workflow QA not yet claimed.
Left before launch	Validate persistence, imports/exports, metadata schemas, calculations, CRM flows, and integration boundaries.
Profit paths	Business SaaS tier, catalog cleanup, release setup, CRM/network packages.
Unique / special	Connects creator business ops directly to creation and fan surfaces.
Problem solved	Creators lose money when rights, metadata, fans, and releases are scattered.
Launch path	catalog.html

Distribution (Business)

Functionality	Release to DSPs.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Distribution - DSP Tracker. Deep workflow QA not yet claimed.
Left before launch	Validate persistence, imports/exports, metadata schemas, calculations, CRM flows, and integration boundaries.
Profit paths	Business SaaS tier, catalog cleanup, release setup, CRM/network packages.
Unique / special	Connects creator business ops directly to creation and fan surfaces.
Problem solved	Creators lose money when rights, metadata, fans, and releases are scattered.
Launch path	distribution.html

Fan Database (Business)

Functionality	Audience and CRM.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Fan Database GOAT Royalty App. Deep workflow QA not yet claimed.
Left before launch	Validate persistence, imports/exports, metadata schemas, calculations, CRM flows, and integration boundaries.
Profit paths	Business SaaS tier, catalog cleanup, release setup, CRM/network packages.
Unique / special	Connects creator business ops directly to creation and fan surfaces.
Problem solved	Creators lose money when rights, metadata, fans, and releases are scattered.
Launch path	fan-db.html

Industry Network (Network)

Functionality	People, deals, reach.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Network = Net Worth GOAT Force Records. Deep workflow QA not yet claimed.
Left before launch	Validate persistence, imports/exports, metadata schemas, calculations, CRM flows, and integration boundaries.
Profit paths	Business SaaS tier, catalog cleanup, release setup, CRM/network packages.
Unique / special	Connects creator business ops directly to creation and fan surfaces.
Problem solved	Creators lose money when rights, metadata, fans, and releases are scattered.
Launch path	network.html

Oscar (AI)

Functionality	Ops and command brain.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Oscar - GOAT Ops Brain. Deep workflow QA not yet claimed.
Left before launch	Define agent permissions, evals, tool logs, model fallback behavior, and owner approval gates.
Profit paths	AI ops subscription, specialist-agent setup, private local workbench licensing.
Unique / special	Pairs specialist AI with local tool policies and GOAT workflows.
Problem solved	Small teams need useful AI workers that understand goals and boundaries.
Launch path	/api/oscar/

LLM Tools (LLM)

Functionality	Models, routes, and tool access.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Ms Money Penny - AI Dashboard. Deep workflow QA not yet claimed.
Left before launch	Define agent permissions, evals, tool logs, model fallback behavior, and owner approval gates.
Profit paths	AI ops subscription, specialist-agent setup, private local workbench licensing.
Unique / special	Pairs specialist AI with local tool policies and GOAT workflows.
Problem solved	Small teams need useful AI workers that understand goals and boundaries.
Launch path	ai-dashboard.html

Autopilot (AI)

Functionality	Goal-driven actions.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Autopilot - Autonomous AI Agent. Deep workflow QA not yet claimed.
Left before launch	Define agent permissions, evals, tool logs, model fallback behavior, and owner approval gates.
Profit paths	AI ops subscription, specialist-agent setup, private local workbench licensing.
Unique / special	Pairs specialist AI with local tool policies and GOAT workflows.
Problem solved	Small teams need useful AI workers that understand goals and boundaries.
Launch path	autopilot.html

AI Dashboard (AI)

Functionality	Models and routes.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Ms Money Penny - AI Dashboard. Deep workflow QA not yet claimed.
Left before launch	Define agent permissions, evals, tool logs, model fallback behavior, and owner approval gates.
Profit paths	AI ops subscription, specialist-agent setup, private local workbench licensing.
Unique / special	Pairs specialist AI with local tool policies and GOAT workflows.
Problem solved	Small teams need useful AI workers that understand goals and boundaries.
Launch path	ai-dashboard.html

API Vault (Vault)

Functionality	Keys and providers.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT API Vault - Secure Key Manager. Deep workflow QA not yet claimed.
Left before launch	Complete security audit, encryption/key-storage design, recovery tests, privacy policy, and production threat model.
Profit paths	Security add-on, private vault setup, enterprise/local deployment premium.
Unique / special	Makes privacy and key management part of the creator OS.
Problem solved	Sensitive files, keys, identity, and AI tools need visible control.
Launch path	api-vault.html

Private Vault (Secure)

Functionality	Protected files.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Vault GOAT Royalty. Deep workflow QA not yet claimed.
Left before launch	Complete security audit, encryption/key-storage design, recovery tests, privacy policy, and production threat model.
Profit paths	Security add-on, private vault setup, enterprise/local deployment premium.
Unique / special	Makes privacy and key management part of the creator OS.
Problem solved	Sensitive files, keys, identity, and AI tools need visible control.
Launch path	goat-vault.html

Biometric Login (Secure)

Functionality	Identity controls.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Fingerprint Analysis GOAT Royalty. Deep workflow QA not yet claimed.
Left before launch	Complete security audit, encryption/key-storage design, recovery tests, privacy policy, and production threat model.
Profit paths	Security add-on, private vault setup, enterprise/local deployment premium.
Unique / special	Makes privacy and key management part of the creator OS.
Problem solved	Sensitive files, keys, identity, and AI tools need visible control.
Launch path	goat-fingerprint.html

Crypto Wallet (Wallet)

Functionality	Portfolio workspace.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Crypto Wallet GOAT Royalty. Deep workflow QA not yet claimed.
Left before launch	Confirm payment/legal boundaries, refund/tax flows, wallet compliance, fulfillment, and customer support.
Profit paths	Memberships, merch margin, digital drops, transaction/setup fees, VIP access.
Unique / special	Monetization surfaces sit beside studio, fan, and AI ops tools.
Problem solved	Creators need audience monetization without hopping between disconnected tools.
Launch path	goat-crypto-wallet.html

Payments (Wallet)

Functionality	Balances and transfers.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Wallet Management GOAT Royalty. Deep workflow QA not yet claimed.
Left before launch	Confirm payment/legal boundaries, refund/tax flows, wallet compliance, fulfillment, and customer support.
Profit paths	Memberships, merch margin, digital drops, transaction/setup fees, VIP access.
Unique / special	Monetization surfaces sit beside studio, fan, and AI ops tools.
Problem solved	Creators need audience monetization without hopping between disconnected tools.
Launch path	wallet.html

Entertainment (Media)

Functionality	Stream and monetize.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Entertainment. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	goat-entertainment.html

VIP Lounge (VIP)

Functionality	Private access lane.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT VIP Celebrity Lounge. Deep workflow QA not yet claimed.
Left before launch	Confirm payment/legal boundaries, refund/tax flows, wallet compliance, fulfillment, and customer support.
Profit paths	Memberships, merch margin, digital drops, transaction/setup fees, VIP access.
Unique / special	Monetization surfaces sit beside studio, fan, and AI ops tools.
Problem solved	Creators need audience monetization without hopping between disconnected tools.
Launch path	goat-celebrity-lounge.html

Fitness Elite (Life)

Functionality	Health and coaching.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Fitness Elite. Deep workflow QA not yet claimed.
Left before launch	Confirm payment/legal boundaries, refund/tax flows, wallet compliance, fulfillment, and customer support.
Profit paths	Memberships, merch margin, digital drops, transaction/setup fees, VIP access.
Unique / special	Monetization surfaces sit beside studio, fan, and AI ops tools.
Problem solved	Creators need audience monetization without hopping between disconnected tools.
Launch path	goat-fitness.html

Money Penny Store (Store)

Functionality	Drops and products.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Shop - Official Merch. Deep workflow QA not yet claimed.
Left before launch	Confirm payment/legal boundaries, refund/tax flows, wallet compliance, fulfillment, and customer support.
Profit paths	Memberships, merch margin, digital drops, transaction/setup fees, VIP access.
Unique / special	Monetization surfaces sit beside studio, fan, and AI ops tools.
Problem solved	Creators need audience monetization without hopping between disconnected tools.
Launch path	shop.html

Production Hub (Production)

Functionality	Media jobs and studio pipelines.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: GOAT Production Hub. Deep workflow QA not yet claimed.
Left before launch	Verify save/export, media upload/download, browser compatibility, mobile/touch QA, demo projects, and sample workflow videos.
Profit paths	Creator subscription, studio/pro tier, service credits, templates, presets, production packages.
Unique / special	Gives creators usable workflow surfaces instead of just AI text generation.
Problem solved	Creators need one place to make, polish, and package media.
Launch path	production-hub.html

Installers (Distribution)

Functionality	Mac, Windows, Linux packages.
Tested	HTTP 200 page load verified on June 26, 2026. Page title: Downloads - GOAT Royalty App. Deep workflow QA not yet claimed.
Left before launch	Validate persistence, imports/exports, metadata schemas, calculations, CRM flows, and integration boundaries.
Profit paths	Business SaaS tier, catalog cleanup, release setup, CRM/network packages.
Unique / special	Connects creator business ops directly to creation and fan surfaces.
Problem solved	Creators lose money when rights, metadata, fans, and releases are scattered.
Launch path	downloads.html

5. Launch Readiness Checklist

Area	Before public launch
Product focus	Pick 2 launch wedges: Oscar local AI workbench and creator studio/business ops are the strongest first pair.
Auth and onboarding	Single account/session story across GOAT surfaces, with clear role and owner controls.
Persistence	Prove save/load/export for each paid workflow and document where data lives.
Reliability	Tool logs, crash reports, model health, self-heal dry runs, and clear user status screens.
Security	Threat model for vault/API keys, privacy policy, secure storage, and audit trail.
Compliance	Casino remains play-money/demo unless licensed; payments/wallet/biometrics need legal review.
Revenue	Publish simple pricing: base Oscar, GOAT Pro, implementation, and pilot packages.
Proof package	Create short proof videos for Oscar, Studio, Anigo Alley trust demo, Halito, Casino demo, and business ops.

Appendix note: This is a working investor/product diligence draft, not legal, tax, investment, security, payment, biometric, gambling, or compliance advice.
