

1. Executive Investment Thesis

Master Oscar is best pitched as a local-first AI operating system with owned app verticals, not a chatbot. The core product turns a private local drive into a supervised AI workbench for creators, builders, and operators: chat, local model runtime, file-aware tool mode, computer control, self-heal, agent crew lanes, voice, attachments, vertical apps, and the Ultimate Bourré sports-culture gaming wedge.

- Why now: AI software is being repriced around defensibility, specialization, data ownership, and workflow depth rather than generic wrappers.

- Why Oscar: the ecosystem already contains working local runtime evidence, portfolio apps, training corpus, crew folders, and cross-platform launch paths.

- Why Ultimate Bourré matters: trademark/rule control creates a branded lane into a card game with documented NBA/athlete culture, public third-party commercialization interest, and a reviewed SCCG term sheet showing inbound strategic interest.

- Why fund: seed capital converts a strong local prototype into a repeatable pilot product with installer, reliability scorecard, proof videos, onboarding, IP packet, compliance memo, and first paid users.

Investor ask: \$2M-\$2.5M seed financing with a target \$12M-\$18M pre-money valuation case. Use funds to reach paid pilots, repeatable installation, reliability metrics, Ultimate Bourré IP/compliance diligence, and a clean data room in 180 days.

Verified prototype/IP floor	\$1.5M-\$4M	Working local AI OS plus live GOAT app catalog, app assets, crew folders, model/tool lanes, and live server evidence.
Base aggressive seed valuation	\$8M-\$12.5M pre-money	Investor packet, proof videos, live GOAT catalog, scripted demo, unified installer, and tight launch wedge.
Ultimate Bourré IP-adjusted seed case	\$12M-\$18M pre-money	Founder-reported Ultimate Bourré trademark/rule leverage plus athlete-culture market proof and a live play-money game floor.
Paid pilot + branded demand case	\$18M-\$30M pre-money	3-5 paid pilots, usage logs, retention proof, repeatable onboarding, named customer references, waitlist/creator demand, and documented IP packet.
ARR-based upside	\$30M+ post traction	\$2M-\$3M ARR at 5-8x ARR, or higher with AI defensibility, retention, vertical expansion, and compliant gaming/community revenue.

2. What Everything Does

Product / lane	Role	What it does
Master Oscar Core	Local AI operating system	Chat, local model runtime, memory, tool routing, file context, voice, attachments, training transcript lane.
Tool Mode + Computer Control	Supervised local execution	Read/search/run/write/patch, web fetch, self-heal, security audit, app open/reveal, screenshot, speak, hotkey, DAW transport.
GOAT Royalty App	Creator and rights operating suite	Music, media, production, royalty/ledger, crew launchers, sound/plugin/studio tool surfaces.
Ultimate Bourré IP	Sports-culture gaming wedge	Founder-reported ownership of the Ultimate Bourré mark and rule/control advantage around a culturally proven athlete card game.
